

THE CURRENT WEATHER REPORT LIVE FROM TYROL

WEATHER IN SERFAUS-FISS-LADIS

Your holiday is approaching swiftly and the anticipation is growing. The first question that comes to mind: How is the weather going to be in the Alps of Serfaus-Fiss-Ladis? All current weather data and daily trends, including forecast for the upcoming days, are available at a glance now!

today, Monday 13.05.2024

On Tuesday, a high-pressure system is centered over Northeast Europe, while a significant low revolves over Western Europe (center near England). This results in a foehn-like southward airflow for us, bringing warm and drier air into the Alpine region. The sun will shine quite persistently. On the southern side of the Alps, however, moister and cloudier air masses will accumulate. On Wednesday and Thursday, foehn effects will continue to be noticeable on the northern side of the Alps. The cloud cover will generally increase, and occasionally some rain showers will mix in. Heading into the weekend, the low will move further into Central Europe. However, a detailed forecast is still hardly feasible for this rather localized low. The weather is likely to continue being unsettled!
